

# Maintenance Guide

## MAT CLEANING GUIDELINES

For best results, tiles and ramps should be cleaned regularly. Simply follow these instructions to keep your tile looking great and functioning effectively.

### PVC NON COATED TURTLE TILES

Sweep regularly, dry or wet mop the surface. Tiles and ramps can be lifted if you desire to clean the floor under them. Wet mop with mild soap or detergent. For best results, use a detergent with a pH between 4 and 9. Dry floor thoroughly before reinstalling tiles

### ENTRANCE TILES (WITH CARPET INLAYS)

Sweep or vacuum regularly. Tiles and ramps can be lifted if you desire to clean the floor under them. Carpet may be shampooed with a mild soap or detergent. For best results, use a detergent with a pH between 4 and 9. Dry floor thoroughly before reinstalling tiles

### COATED TILES

We do not recommend washing any coated tile or ramp. Coated tiles may be lightly swept, taking care not to remove grit or rubberized coating. Tiles and ramps can be lifted if you desire to clean the floor under them. Dry floor thoroughly before reinstalling tiles.

## DURA CRIB AND DURA STAT CLEANING GUIDELINES

To remove most debris, products may be washed using a solution of dish detergent such as Dawn and warm water. Rinse thoroughly and dry thoroughly before putting the products back into circulation. Products may also be sanitized using a cleaning agent at the suggested manufacturer's ratio (ie, Pinesol, Bleach, Hydrogen Peroxide, Vinegar, Other Medical Sanitizing Agents). Do not expose products for periods longer than the manufacturer's direction as this could cause a weakening of the plastic.
